 shehara.dayzsolutions.com  Tampere, Finland

PROFILE

I'm a Software Engineer with a strong track record building and shipping both mobile and web applications end to end. I develop cross-platform and native mobile apps with Flutter and Swift, and build secure, scalable web applications across the stack, from PHP and Laravel to modern JavaScript frameworks like Next.js. Comfortable owning features from API and database design through to polished, user-facing interfaces, I apply modern architecture patterns and clean code principles to deliver reliable, high-performance products.

PROFESSIONAL EXPERIENCE

Software Engineer

01/2026 – Present

[Freelance \(Upwork & Private Contracts\)](#) 

Remote - EU, EEA, USA

UNiFY (USA Based Contract)

Mobile and backend developer on UNiFY, a multi-platform sports app for NBA, WNBA, NFL, and NCAA fans, built with a Flutter frontend and Python/Flask backend. Joined to help stabilize, refactor, and extend a partially completed codebase inherited from a previous vendor.

- Stabilized an inherited Flutter app and Python/Flask API, fixing critical bugs, crashes, and data mismatches between client and backend to get the platform production-ready.
- Refactored key modules using clean state management (Provider) and structured navigation (go_router), improving API contracts, maintainability, and overall reliability.
- Built real-time features with WebSockets, including live scores and in-app chat, keeping data synced across thousands of concurrent users.
- Implemented media streaming, rich push notifications, and NFC "Baller Band" integration for a connected, interactive fan experience.
- Worked across a PostgreSQL, Redis, and AWS backend stack, using Redis for caching and real-time data and integrating Stripe for secure payments.

Tech: Flutter, Dart, REST APIs, WebSockets, Push Notifications, NFC, Python, Flask, PostgreSQL, Redis, AWS, Stripe

Associate Software Engineer

05/2025 – 07/2026

DayZ Solutions (Pvt.) Ltd.

Nittambuwa, Sri Lanka

Deurbeslag Gigant

As my primary responsibility at DayZ I led full-stack development of Empire, a centralized inventory and order management system for a Dutch retailer, handling 50,000+ products and syncing stock, pricing, and orders across 5+ WooCommerce stores in real time.

- Took over a live Laravel platform from a senior engineer, stabilizing a buggy codebase and refactoring it around best practices (service classes, repositories, thin controllers).
- Integrated 5+ WooCommerce stores and the [Bol.com](#)  API via REST with rate limiting and retry logic to keep inventory in sync, prevent overselling, and post tracking numbers back to marketplaces.
- Automated fulfillment with GLS/DHL label printing, WooCommerce auto-completion on shipping, and Dropbox-based document delivery to warehouse printers.
- Replaced slow SQL search with Meilisearch for fast, typo-tolerant full-text search across 50,000+ products.
- Optimized performance with eager loading, indexing, caching, and queued jobs, and worked in a PR-based workflow across testing, staging, and production.

Tech: PHP, Laravel, Livewire, Alpine.js, Tailwind CSS, MySQL, Meilisearch, REST APIs, WooCommerce REST API, GLS API, DHL API, [Bol.com](#)  API, Dropbox API, Git, Bitbucket

ECore (Web + Mobile App)

Served as Lead Developer for the companion mobile app of ECore, a backend automation platform for [BetonStorten.nl](#)  managing orders, inventory, machinery, resources, work orders, and personnel, and also contributed to the core Laravel web application. Both are connected over REST APIs and WebSockets.

- Led the companion mobile app end to end, building intuitive workflows and scheduling views from scratch with Flutter and Dart while owning mobile technical direction alongside engineers and the Director.
- Delivered and maintained the REST APIs and WebSocket connections powering real-time order tracking, worker coordination, and live machinery status.
- Contributed to the core Laravel web app, implementing order-processing and inventory logic and optimizing database schemas and heavy calculations for integrity and speed under load.
- Contributed to the web frontend overhaul (Livewire 2 to 3), built custom counter-ticket workflows with refined role-based access control, and worked in a strict PR-based, multi-environment workflow with integration tests before release.

Tech: Flutter, Dart, Laravel, PHP, MySQL, REST APIs, WebSockets, Livewire 3, Alpine.js, Tailwind CSS, Git, Bitbucket

BusinessLabels.nl (BBNL)

Participated in the full-scale website rebuild of [BusinessLabels.nl](#)  (rebuild staging: [bbnl-front.dayzsolutions.com](#) ), a Dutch B2B e-commerce platform for industrial label printers and custom label media, connecting a modern React frontend to a Laravel REST API backend across a catalog of more than 50,000 product combinations.

- Translated Figma design specs into responsive, modular React components with Tailwind CSS and Radix UI, building dynamic sidebar archive filters and header/footer navigation that improved B2B product searchability.
- Integrated Next.js pages with the Laravel REST API for dynamic data binding, customer account management, and the dynamic materials listing page.
- Resolved critical client-side payment and cart bugs, including a fix for products being added to the cart in the background without user feedback during searches.
- Handled deployment and migration of the Next.js frontend and Laravel backend to new servers, configuring Node.js builds and PM2 daemon processes for continuous uptime and auto-restarts.

Tech: Next.js, React, Tailwind CSS, Radix UI, REST APIs, Node.js, PM2, Git, GitHub

Software Developer

08/2022 – 06/2025

Freelance

Hybrid - Sri Lanka

Designed and built full-stack web and desktop applications for local clients while studying for my HND, turning self-driven hobby projects into real, delivered software for paying clients.

- Developed responsive, database-driven websites with PHP, Laravel, MySQL, Tailwind CSS, and JavaScript, including a migration consultancy site with client/inquiry management and a photographer portfolio with a custom admin panel.
- Engineered custom C# / .NET desktop management systems, including a pharmacy inventory system and a two-part supermarket solution (cashier + inventory) sharing a single SQL database for real-time stock accuracy.

Tech: PHP, Laravel, MySQL, Tailwind CSS, JavaScript, C#, .NET Framework, SQL, Git, GitHub

EDUCATION

Bachelor of Engineering in Software Engineering

08/2026 – Present

Tampere University of Applied Sciences

Tampere, Finland

Admitted to the Bachelor of Engineering in Software Engineering at Tampere University of Applied Sciences (TAMK), a 240-ECTS, four-year programme starting in August 2026, focused on modern software development, web and mobile applications, and practical, project-based learning for international software engineering roles.

Pearson BTEC Level 5 HND in Computing - Software Engineering

02/2023 – 02/2025

ESOFT Metro Campus - Gampaha

Gampaha, Sri Lanka

Completed the Pearson BTEC Level 5 Higher National Diploma in Computing (Software Engineering) with an overall grade of Merit, covering programming, databases, networking, security, software development lifecycles, data structures and algorithms, web development, and UX/UI.

Ofqual-regulated qualification: QN 603/7596/6, Reg. No. RG 10904.

Pearson Assured Level 3 Diploma in Information Technology (DiTEC)

07/2022 – 08/2023

ESOFT Metro Campus - Gampaha

Gampaha, Sri Lanka

Completed the Pearson Assured Level 3 Diploma in Information Technology (DiTEC) with an overall grade of Merit, a 1,200-hour programme covering IT concepts, MS Office productivity, computer hardware, networking, internet and web design, graphics and multimedia, software engineering, Python programming, databases with SQL, C# programming, and a final practical project.

Pearson Assured programme: Pearson ID SF96401, ESOFT ID E176422

Assured Level 3 Diploma in English (DiE)

07/2022 – 08/2023

ESOFT Metro Campus - Gampaha

Gampaha, Sri Lanka

Completed the ESOFT Assured Level 3 Diploma in English (DiE), a communicative, skills-based programme with 15 units and 4 assessments in grammar, vocabulary, reading, writing, listening, speaking, presentations, and viva, achieving a Pass grade and being awarded the diploma.

Diploma in English programme: ESOFT ID E176422, Ref. GAM0170214, REG ID 00148929.

Passed the GCE Ordinary Level examination with strong results: A in Information & Communication Technology, A in English, B in Mathematics, B in Science, B in Sinhala, and C grades in Commerce, Art, History, and Buddhism.

TECHNICAL SKILLS

Flutter | Dart | Swift | Swift UI | PHP | Laravel | Next JS | Node.js | Tailwind CSS |
Python | Flask | REST APIs | WebSockets | MySQL | PostgreSQL | Redis | Meilisearch |
Git | GitHub | Bitbucket | GitLab | Nginx | OOP | SDLC | UI & UX

PROFESSIONAL SKILLS

Leadership & Ownership | Accountability | Problem Solving & Critical Thinking |
Teamwork & Collaboration | Fast Learning & Self-Motivation | Attention to Detail |
Time Management & Prioritization | Client & Stakeholder Communication

LANGUAGES

English — Fluent

Finnish — Conversational

Sinhala — Native/Bilingual
