PROFILE

I'm a Software Engineer with a strong track record building and shipping both mobile and web applications end to end. I develop cross-platform and native mobile apps with Flutter and Swift, and build secure, scalable web applications across the stack, from PHP and Laravel to modern JavaScript frameworks like Next.js. Comfortable owning features from API and database design through to polished, user-facing interfaces, I apply modern architecture patterns and clean code principles to deliver reliable, high-performance products.

PROFESSIONAL EXPERIENCE

Software Engineer

Freelance

01/2026 – Present

Remote

UNIFY (US Client)

Mobile and backend developer on UNiFY, a multi-platform sports app for NBA, WNBA, NFL, and NCAA fans, built with a Flutter frontend and Python/Flask backend. Joined as a developer to help stabilize, refactor, and extend a partially completed codebase inherited from a previous vendor.

- Stabilized an inherited Flutter app and Python/Flask API, fixing critical bugs, crashes, and data mismatches between client and backend to get the platform production-ready.
- Refactored key modules using clean state management (Provider) and structured navigation (go_router), improving API contracts, maintainability, and overall reliability.
- Built real-time features with WebSockets, including live scores and in-app chat, keeping data synced across thousands of concurrent users.
- Implemented media streaming, rich push notifications, and NFC "Baller Band" integration for a connected, interactive fan experience.
- Worked across a PostgreSQL, Redis, and AWS backend stack, using Redis for caching and real-time data and integrating Stripe for secure payments.

Tech: Flutter, Dart, Provider, go_router, REST APIs, WebSockets, Push Notifications, NFC, Python, Flask, PostgreSQL, Redis, AWS, Stripe

Associate Software Engineer

DayZ Solutions (Pvt.) Ltd.

05/2025 – 07/2026

Nittambuwa, Sri Lanka

Deurbeslag Gigant - Lead Developer

Led development of an inventory management system for a Dutch retailer, handling 50,000+ products and syncing stock, pricing, and orders across 5+ WooCommerce stores in real time.

- Took over a live Laravel platform from a senior engineer, stabilizing a buggy codebase and refactoring it around best practices (service classes, repositories, thin controllers).
- Integrated 5+ WooCommerce stores via REST API with rate limiting and retry logic to keep inventory in sync and prevent overselling.
- Automated fulfillment with GLS and DHL shipping label printing, plus Dropbox-based document delivery to warehouse printers.
- Built in-app packing slips and purchase orders with automated customer emails.
- Replaced slow SQL search with Meilisearch for fast, typo-tolerant full-text search across 50,000+ products.
- Optimized performance with eager loading, indexing, caching, and queued jobs to stay responsive at scale.

Tech: PHP, Laravel, Livewire, Alpine.js, Tailwind CSS, MySQL, Meilisearch, REST APIs, WooCommerce REST API, GLS API, DHL API, Dropbox API, Git, Bitbucket

ECore (Web + Mobile App)

Backend automation platform for BetonStorten.nl [🔗](#) managing orders, inventory, machinery, resources, work orders, and personnel, with a companion mobile app connected over REST APIs and WebSockets.

- Implemented core business logic for order processing and inventory tracking in Laravel, handling the platform's heavy calculations and data persistence.
- Built and optimized the database schema and calculations for data integrity and performance under heavy load.
- Delivered and maintained the REST APIs and WebSocket connections powering the companion mobile app with real-time updates, order sync, and live status.
- Developed the complete companion mobile app with Flutter and Dart, integrating real-time order creation, product updates, and work order handling while keeping business logic server-side.
- Applied modern UX principles to reduce friction in mobile workflows and improve performance.

Tech: Laravel, PHP, MySQL, REST APIs, WebSockets, Flutter, Dart, Tailwind CSS, Livewire, Git, Bitbucket

Software Developer

Freelance

Designed and built full-stack web and desktop applications for local clients while studying for my HND, turning self-driven hobby projects into real, delivered software for paying clients.

- Developed responsive, database-driven websites with PHP, Laravel, MySQL, Tailwind CSS, and JavaScript, including the Bright Achievers migration consultancy site with streamlined client and inquiry management, and a photographer portfolio featuring a custom admin panel for self-managed galleries.

08/2022 – 06/2025

Hybrid

- Engineered custom desktop management systems in C# / .NET Framework, including the Pubudhu Pharmacy inventory system and a two-part supermarket solution (cashier + inventory) sharing a single SQL database for real-time stock accuracy.
- Gained hands-on, full-cycle experience across both web and desktop stacks, from database design and backend logic to responsive UI, giving me a strong, versatile engineering foundation early on.

Tech: PHP, Laravel, MySQL, Tailwind CSS, JavaScript, C#, .NET Framework, SQL, Git, GitHub

EDUCATION

Bachelor of Engineering in Software Engineering

Tampere University of Applied Sciences

08/2026 – Present

Tampere, Finland

Admitted to the Bachelor of Engineering in Software Engineering at Tampere University of Applied Sciences (TAMK), a 240-ECTS, four-year programme starting in August 2026, focused on modern software development, web and mobile applications, and practical, project-based learning for international software engineering roles.

Pearson BTEC Level 5 HND in Computing - Software Engineering

ESOFT Metro Campus - Gampaha

02/2023 – 02/2025

Gampaha, Sri Lanka

Completed the Pearson BTEC Level 5 Higher National Diploma in Computing (Software Engineering) with an overall grade of Merit, covering programming, databases, networking, security, software development lifecycles, data structures and algorithms, web development, and UX/UI.

Ofqual-regulated qualification: QN 603/7596/6, Reg. No. RG 10904.

Pearson Assured Level 3 Diploma in Information Technology (DiTEC)

ESOFT Metro Campus - Gampaha

07/2022 – 08/2023

Gampaha, Sri Lanka

Completed the Pearson Assured Level 3 Diploma in Information Technology (DiTEC) with an overall grade of Merit, a 1,200-hour programme covering IT concepts, MS Office productivity, computer hardware, networking, internet and web design, graphics and multimedia, software engineering, Python programming, databases with SQL, C# programming, and a final practical project.

Pearson Assured programme: Pearson ID SF96401, ESOFT ID E176422

Assured Level 3 Diploma in English (DiE)

ESOFT Metro Campus - Gampaha

07/2022 – 08/2023

Gampaha, Sri Lanka

Completed the ESOFT Assured Level 3 Diploma in English (DiE), a communicative, skills-based programme with 15 units and 4 assessments in grammar, vocabulary, reading, writing, listening, speaking, presentations, and viva, achieving a Pass grade and being awarded the diploma.

Diploma in English programme: ESOFT ID E176422, Ref. GAM0170214, REG ID 00148929.

Passed the GCE Ordinary Level examination with strong results: A in Information & Communication Technology, A in English, B in Mathematics, B in Science, B in Sinhala, and C grades in Commerce, Art, History, and Buddhism.
